Introduction

The Breeze API is a powerful API through which you can fetch live/historical data, automate your trading strategies, and monitor your portfolio in real time.

An AppKey and secret_key pair is issued that allows you to connect to the server. You have to register a redirect url where you will be sent after the login.

Breeze API is designed to accept 100 API calls per minute and 5000 API calls per day.

All inputs are form-encoded parameters and responses are in the form of JSON. The success and the error states are indicated by standard HTTP codes and are accompanied by JSON data.

Asset Class	NSE
Equity	Yes
Equity Futures	Yes
Equity Options	Yes

Currently, securities listed on BSE, MSEI and NCDEX are not available on Breeze API.

How To Navigate

The documentation specifies various API endpoints which can be used to perform many functions as stated above.

In this documentation, you will find about the following:

- The computation of the checksum
- Sending the common request headers
- API Parameters, its data type and description
- Language specific guides
- Sample JSON Response

Checksum Computation & Login

REGISTRATION

Authentication is done following the OAuth2.0 protocol. It ensures that all the fields in the request are safe from tampering.

Visit the Breeze API portal to register an app by providing the following information:

- App Name
- Redirect URL

After the app is successfully registered, you should create the AppKey and secret_key pair. These keys will be unique to the app registered. The AppKey is the identity of the app for the API system and secret_key is used to encrypt messages sent to the API system by the client system.

All requests must contain:

- App Key
- Secret Key
- Session Token
- Checksum
- Timestamp

CHECKSUM COMPUTATION

- Checksum is computed via SHA256 hash (Time Stamp + JSON Post Data + secret_key)
- All JSON Data should be stringified before sending it to the I-Direct system.

LOGIN

Navigate to the Breeze API Login with your URL-encoded AppKey to initiate the login flow.

https://api.icidirect.com/apiuser/login?api_key=AppKey

YouTube Link: https://youtu.be/BE877n6TURM?si=1wrcnpxUe7S_a101

Upon successful login you will have an API_Session in the address bar. Use this API_Session value against key named SessionToken in the CustomerDetails API to obtain a session_token value, which is then used as SessionToken for signing all subsequent requests.

Request Headers

Key	Value	Description
X-Checksum	--	Token followed by combination of ((ISO8601 UTC DateTime Format with 0 milliseconds) + JSONPostData + secret_key)
X-Timestamp	2024-06-01T10:23:56.000Z	ISO8601 UTC DateTime Format with 0 milliseconds i Request will be honoured only if server time stamp and client timestamp is between 60 seconds
X-AppKey	--	AppKey which is received during registration
X-SessionToken	--	SessionToken value is received in CustomerDetails API

i The Customer Details API do not require headers

Errors

Exceptions and Errors

The API server generates name of the exception for error responses. While writing your code, you can raise corresponding exceptions after defining them in your language/library. The table below shows the

list of exceptions and common error codes.

Error Code	Error Type
400	Bad Request
401	Unauthorized
403	Forbidden
404	Non Found
408	Request Timeout
200	OK

Instruments

You can download the Security Master file for token mapping at your end here. It is generated/updated daily at 8:00 AM.

 Kindly note that the rate limit is set to 100 API calls per minute and 5000 API calls per day.

CustomerDetails

CustomerDetails

```
var axios = require('axios');
var data = JSON.stringify({
```

```

    "SessionToken": "58593",
    "AppKey": "8g791^N029R47I831B8153=^02f#7u8g"
  });

var config = {
  method: 'get',
  url: 'https://api.icicidirect.com/breezeapi/api/v1/customerdetails',
  headers: {
    'Content-Type': 'application/json'
  },
  data : data
};

axios(config)
.then(function (response) {
  console.log(JSON.stringify(response.data));
})
.catch(function (error) {
  console.log(error);
});

```

Sample JSON Response

```

{ 'Success':
  { 'exg_trade_date': { 'NSE': '04-Feb-2025',
                      'BSE': '04-Feb-2025',
                      'FNO': '04-Feb-2025',
                      'NDX': '04-Feb-2025' },
    'exg_status': { 'NSE': 'C', 'BSE': 'C', 'FNO': 'Y', 'NDX': 'C' },
    'segments_allowed': { 'Trading': 'Y',
                          'Equity': 'Y',
                          'Derivatives': 'Y',
                          'Currency': 'N' },
    'idirect_userid': 'XY123456',
    'idirect_user_name': 'John Smith',
    'idirect_ORD_TYP': 'N',
    'idirect_lastlogin_time': '04-Feb-2025 08:52:03',
    'mf_holding_mode_popup_flg': 'N',
    'commodity_exchange_status': 'N',
    'commodity_trade_date': '04-Feb-2025',
    'commodity_allowed': 'C' },
  'Status': 200,
  'Error': None
}

```

REQUEST INFORMATION

Category	Value
HTTP Request	GET
URL	https://api.icicidirect.com/breezeapi/api/v1/customerdetails

BODY PARAMETERS

Parameter	Data Type	Description	Mandatory
SessionToken	String	SessionKey is received after logging into the breeze website	Yes
AppKey	String	AppKey is received during registration	Yes

DematHoldings

GetDematHoldings

```

var axios = require('axios');
var data = JSON.stringify({});

var config = {
  method: 'get',
  url: 'https://api.icicidirect.com/breezeapi/api/v1/dematholdings',
  headers: {
    'Content-Type': 'application/json',
    'X-Checksum': 'token ',
    'X-Timestamp': '',
    'X-AppKey': '',
    'X-SessionToken': ''
  },
  data : data
};

axios(config)
.then(function (response) {
  console.log(JSON.stringify(response.data));
})

```

```
    })  
    .catch(function (error) {  
        console.log(error);  
    });  
});
```

Sample JSON Response

```
{'Success':  
  [{ 'stock_code': 'UNITEC',  
    'stock_ISIN': 'INE694A01020',  
    'quantity': '1',  
    'demat_total_bulk_quantity': '1',  
    'demat_avail_quantity': '0',  
    'blocked_quantity': '0',  
    'demat_allocated_quantity': '1'  
  }],  
'Status': 200,  
'Error': None}
```

REQUEST INFORMATION

Category	Value
HTTP Request	GET
URL	https://api.icicidirect.com/breezeapi/api/v1/dematholdings

BODY PARAMETERS

Note: Demat Holdings API does not require body parameters

Funds

GetFunds

```
var axios = require('axios');  
var data = JSON.stringify({});
```

```
var config = {
  method: 'get',
  url: 'https://api.icicidirect.com/breezeapi/api/v1/funds',
  headers: {
    'Content-Type': 'application/json',
    'X-Checksum': 'token ',
    'X-Timestamp': '',
    'X-AppKey': '',
    'X-SessionToken': ''
  },
  data : data
};

axios(config)
.then(function (response) {
  console.log(JSON.stringify(response.data));
})
.catch(function (error) {
  console.log(error);
});
```

Sample JSON Response

```
{'Success':
  {'bank_account': '123456789012',
   'total_bank_balance': 800000000.0,
   'allocated_equity': 200000000.0,

REQUEST INFORMATION

The WebSocket API uses WebSocket protocol to establish a single long standing TCP connection after an HTTP handshake to receive streaming quotes. To connect to the ICICI's WebSocket API, you will need a

WebSocket client library in your choice of programming language we will provide the sample code supported in 4 languages(Python, C#, Javascript and Java). You can subscribe for stock-token on a single WebSocket connection and receive live stream for them.

The One Click F&O is a functionality which lets you chose from range of strategies curated by our award winning research team. It helps you save hours and hours of research and analysis time required to make a trading decision. With this function of One Click F&O, our research team does all the heavy lifting of research and analysis of over 170 F&O stocks with different expiries in real time and develop high probability winning opportunities for our customers. For the strategies available, you can either chose the desired strategy and place order in a single click or opt for customising by copying our recommended strategy to suit your requirement. You can also view margin required, maximum profit/loss, timeframe to hold the strategy before making a trade.

GET USER ID AND SESSION TOKEN

The User Id and session Token can be obtained by decoding the 'session_token' from base64 , This session token obtained via get_customer_details API. An example is given in python

CONNECT TO WEBSOCKET SERVER

Websocket endpoint is https://livefeeds.icicidirect.com/. Please make sure to pass the auth credentials and User-Agent in headers

The User Id and session Token can be obtained by decoding the 'session_token' from base64 , This session token obtained via get_customer_details API. An example is given in python

CONNECT TO WEBSOCKET SERVER

Websocket endpoint is **<https://breezeapi.icicidirect.com/>** and the socket.io path is **`'/ohlcvstream'`**. Please make sure to pass the auth credentials and User-Agent in headers

SCRIPT CODE OF A STOCK

Real streaming ohlcv data of a stock is obtained by subscribing to a particular stock using the Script Code of the stock. Script Code of a stock has the following pattern as given below.

`'ExchangeType.Qualifier!Scripid'`

Examples of script code are 4.1!1594, 1.1!500209 , 13.1!5023, 6.1!247457

The Qualifier of an ExchangeType corresponds to a particular Exchange Code. Please refer to the table below

Qualifier	Exchange Code
4.1	NSE,NFO

Note:

1) Suffix '.1' in Qualifier refers to Exchange Quotes whereas '.2' refers to Market Depth. In Streaming OHLCV, we just need Exchange Quotes 2) Maximum 2000 scripts can be subscribed at a time in all OHLC and Live streaming.

For ScriptId, please refer to the CSV attachment in the link below

<https://traderweb.icicidirect.com/Content/File/txtFile/ScripFile/StockScriptNew.csv>

Column **'TK'** in the CSV File refers to ScriptId.

SUBSCRIBE TO OHLCV LIVE STREAM OF A PARTICULAR STOCK

To subscribe to a particular stock, we require to have the Script Code of a particular stocks. We can subscribe to more than one stock for a particular interval.

To subscribe to stock, we need to connect to a channels. Channels are divided as per the candle intervals. The channel names are as follows

Channel Name	Interval
1SEC	1 second
1MIN	1 minute
5MIN	5 minutes
30MIN	30 minutes

STREAMING RESPONSE DATA CONVENTION

The streaming response Data has the following structure as shown in tables below. The response is a comma separated string.

For equity i.e NSE

Attribute	Description
exchange code	Exchange Code (NSE)
stock code	Stock Code
low	Low Price
high	High Price
open	Open Price
close	Close Price
volume	Traded Volume
datetime	Date in YYYY-MM-DD HH:MM:SS format

Attribute	Description
interval	1SEC,1MIN,5MIN,30MIN

For derivative options/futues i.e NFO,NDX,MCX

Attribute	Description
exchange code	Exchange Code (NFO)
stock code	Stock Code
expiry date	Date in YYYY-MM-DD format
strike price	Strike Price (Only For Options)
right type	Right Type (Only For Options)
low	Low Price
high	High Price
open	Open Price
close	Close Price
volume	Traded Volume
oi	Open Interest
datetime	Date in YYYY-MM-DD HH:MM:SS format
interval	1SEC,1MIN,5MIN,30MIN

Note: interval - 1SEC,1MIN,5MIN,30MIN (for 1second, 1minute, 5minutes, 30minutes respectively)
